## Research Interests

I am an environmental biologist, and researcher of applied botany at the University of L'Aquila, with a background in alpine ecology, ecological modelling, and plant traits. I am working on past and present factors shaping diversity patterns and processes of plant communities (vegetation) from micro to macro scale. Focusing mostly on mountain ecosystems, my principal aim is to disentangle the role of climate, topographic and anthropogenic factors on the taxonomic, functional, and phylogenetic composition and dissimilarity of plant communities. I'm currently working on topics related to conservation biology, trying to quantify the effectiveness of protected areas in conserving biodiversity. Last but not least, since 2023, I've joined projects focused on Islands, of which some aim to investigate the ecological dynamics of plant communities in small islands.

## Main research Topics

- 1) Alpine ecology;
- 2) Ecological modelling;
- 3) Conservation Biology;
- 4) Vegetation science;
- 5) Island Biogeography.
